AI in Housing

Verifying Universal Credit 2022

AI is being used to assist in supporting customers struggling to pay their rent. An AI engine has been trained to recognise patterns in customer behaviour and payments. Where there is a change in behaviour, the system sends an automated message – via text or email – or alerts a colleague to check on the resident.

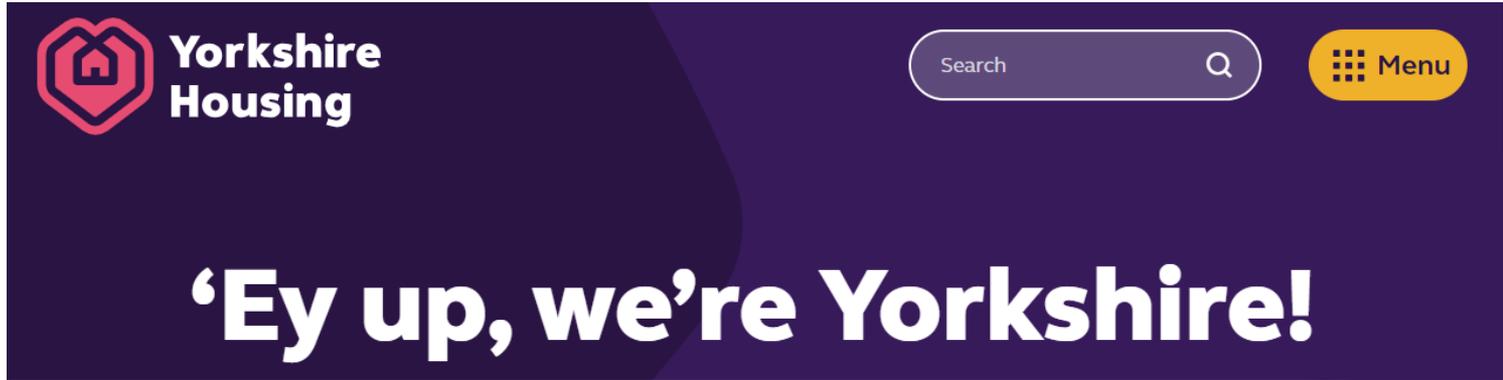

Strict rules have been applied to the use of the AI engine. First, customers can opt out of receiving automated messages at any time. Second, the AI will never be used to make any decisions that could result in legal proceedings on rent arrears. Finally, any customers with particular vulnerabilities do not receive any automated messages. A more personalised approach is taken for them, with contact by members of the team to ensure support is in place.

Used in finance to process supplier invoices.

Savings fed back into the community.

AI in Housing

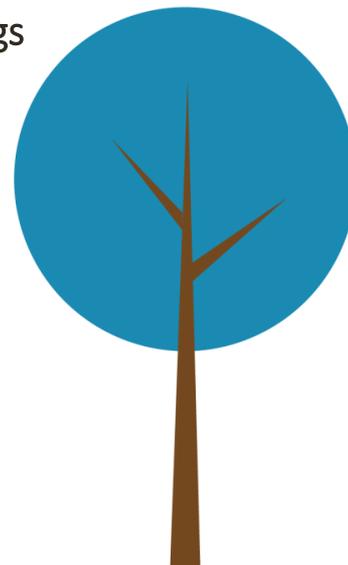

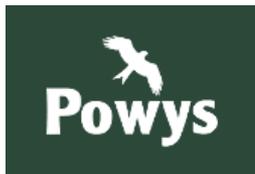

The screenshot shows the top navigation bar of the Yorkshire Housing website. On the left is the Yorkshire Housing logo, which consists of a pink house icon inside a hexagon, followed by the text 'Yorkshire Housing'. In the center is a search bar with the word 'Search' and a magnifying glass icon. On the right is a yellow 'Menu' button with a grid icon. Below the navigation bar, the main heading reads 'Ey up, we're Yorkshire!' in a large, white, sans-serif font.

Potential and Current Uses

CHATBOTS & VIRTUAL ASSISTANTS – CUSTOMER SERVICE ETC. GATHERS INFORMATION ABOUT TENANTS, AND ASPECTS OF PROPERTIES WHICH SHOULD BE INTERLINKED.

AI meeting notes (including tenant meetings)

Repairs and Maintenance – analyse data from maintenance logs to predict when equipment is likely to fail.

Compliance

Rent and arrears management

Gathering new data such as smart sensors inside each property which would anticipate problems rather being reactive.

Energy management – optimise energy usage, reducing costs.

Tenant screening and allocation – analyse applications and allocates most suitable property.

Community building and engagement – AI can facilitate better community engagement by analysing social interactions and preferences, helping to organise events and activities that foster a sense of community among residents.

AI Comes with Risks

Confidentiality.

Copyright.

Underlying bias.

Can be manipulated.

Transparency / explainability.

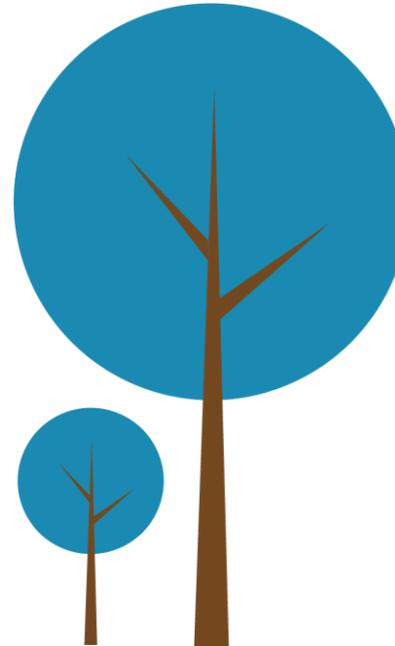

Service failure.
